

List of Tables

Table 1. Summary of average wet and dry season flows to the Loxahatchee Estuary	17
Table 2. Synopsis of general taxonomic composition 1992 - 1997	28
Table 3. Relative abundance and ranking of the most abundant species in the Loxahatchee Estuary.....	29
Table 4. Results of fish surveys in the Loxahatchee Estuary (1982-1983)	30
Table 5. Average freshwater inflow into the Northwest Fork from major tributaries (1980-1982)..	35
Table 6. Generalized hydrogeology of the Loxahatchee Watershed	37
Table 7. Acreage percentage by land use for subbasins within the Loxahatchee River watershed.	41
Table 8. Acreage by land use for subbasins within the Loxahatchee River watershed.	41
Table 9 Major wetland systems in the Loxahatchee River watershed.....	49
Table 10. Threatened and endangered animals in the Loxahatchee River watershed.	52
Table 11. Threatened and endangered wetland plant species that occur in the project area.....	53
Table 12. Problems identified within the various subbasins of the Loxahatchee River Watershed	58
Table 13. C-18 flood discharge characteristics	61
Table 14. Water Quality Classification of Waters in the Loxahatchee River.....	67
Table 15. Comparison of SFWMD approximate river mile locations to river mile locations used in other studies..	77
Table 16. DBHydro Flow Data Available for the Loxahatchee River and Estuary.....	78
Table 17. Sites along the Northwest Fork where long-term salinity records were simulated using the hydrodynamic/salinity model.	81
Table 18. Dichotomous key that was used as the basis for determining the abundance index	85
Table 19. Measured parameters* for key species.....	86
Table 20. Vegetation parameters included in the salinity-vegetation model.....	89
Table 21. Loxahatchee river sites used to derive model formulas.....	89
Table 22. Total mean daily discharges to the Northwest Fork of the and corresponding upstream extent of the saltwater wedge in river miles.....	95
Table 23. Summary of average wet and dry season flows to the Loxahatchee Estuary.	97
Table 24. Comparison of historical and current flow conditions at the Lainhart Dam.....	98
Table 25. Measured salinity from the Northwest Fork of the Loxahatchee River.....	101
Table 26. Soil salinity from transects, calculated from conductivity and chloride analyses	103
Table 27. Plant species collected in the Northwest Fork Floodplain	112
Table 28. Abundance index: results of a semiquantitative vegetation survey at river vegetation sampling locations, Northwest Fork (November 2000/December 2001).	113
Table 29. Key species identified along the Northwest Fork and their salinity tolerances.	113
Table 30. Number of adults and saplings of selected tree species recorded during the January 2002 quantitative vegetation survey, at eight locations along Northwest Fork.	115
Table 31. Mean trunk diameter (DBH) and mean tree height of adults at eight river vegetation sampling locations, Northwest Fork of the Loxahatchee River (January 17, 2002).....	116
Table 32. Number of saplings and seedlings present at eight river vegetation sampling locations, Northwest Fork of the Loxahatchee River (January 17, 2002)	116
Table 33. Interpreted vegetation coverages (acres) for 1940, 1985 and 1995 for the Northwest Fork and adjacent areas, from river miles 4.5 to 8.9, based on aerial photography.	119
Table 34. Summary statistics of estimated mean daily salinity concentrations for the 30-Year simulation period (1971-2001) for seven river vegetation sampling sites.....	138
Table 35. Duration of estimated mean daily salinity concentrations from the 30-year model simulation	138
Table 36. Salinity Event Duration (days) and Time Between Events (days), based on Simulated Salinity “Threshold” Levels, at Seven Sites along the Northwest Fork of the Loxahatchee River	139
Table 37. Flow required from the Lainhart Dam to maintain mean tide salinity levels at selected river miles.....	140
Table 38. Estimated salinity event ratio (Ds/Db) at a 2 ppt threshold associated with a decline of measured freshwater vegetation parameters	142
Table 39. Output of the SAVELOX model: mean salinity event >2 ppt duration (days), mean time between events (days), and flow (cfs*) associated with community vegetation parameter changes in red maple (<i>Acer rubrum</i>).....	143

List of Tables (cont.)

Table 40. Various salinity parameters that can be used to protect the resource	145
Table 41. Major projects, cost, benefits and completion schedule for projects that will provide additional water for the Loxahatchee slough and river (Source: SFWMD 2002).....	157
Table 42. MFL Recovery Program showing incremental improvements in the District's ability to meet 35 cfs flow target.....	157
Table 43. Loxahatchee River design and operational issues and ongoing and future activities that should address these concerns	161
